## Low Water Cut-Offs – Electronic For Hot Water and Steam Boilers

### Series 751P/752P

- For commercial or industrial applications
- Primary or secondary control on hot water boilers
- Secondary control (manual reset models only) on steam boilers
- Manual reset models meet the requirements of **ASME Standard CSD-1**. If the control is in a low water condition when there is an interruption of power, the control will remain in a low water condition when power is restored. The reset button will need to be pressed when the water level is restored to a level above the probe to allow the burner to fire.

#### Standard Features

- Green power in on indicating LED
- Red low water indicating LED
- Test button
- No lock out with loss of power if probe is in water
- 20,000 ohms sensitivity

# PRESSURE/TEMPERATURE GAUGE

## Rear or Lower Connection

The Miljoco Models PB3008L & PB3008 dual indicating pressure/temperature gauges, or commonly referred to as “tridicators”, combine the value of an individual pressure gauge and thermometer in one instrument. They are the ideal choice for boilers and other hot water applications where space limitations and installation costs are a consideration. These instruments contain both a bourdon tube assembly to indicate pressure, and a bimetal coil assembly to indicate temperature in both Fahrenheit and Celsius. **WARNING: Not suitable for steam service.**
